

# Agile B-OSS

WITH THE REVENUE EXTRACTION GATEWAY

## **Designed to be flexible and adaptable**

The rXg's flexible payment solutions allow for local representatives to collect payments in any form they are willing to accept, including barter.

# Business and Operational Support System

The rXg is the perfect complement to your controllers, wireless access points (WAPs) and switches from your preferred vendor. The rXg also supports a broad spectrum of last mile wireline and wireless distribution technologies including but not limited to PON/GPON/XGS-PON, DOCSIS, free space optics, fixed wireless broadband, and much more! The rXg integrates seamlessly with these devices, automatically adopting the southbound equipment and managing it for you. This means that you no longer have to worry about manual configuration processes. The rXg is like having a network engineer on staff 24/7, who can perform tasks at lightning speed. With the rXg, you can enjoy a fully automated, integrated solution that saves you time, reduces operational downtime, and helps you achieve maximum network performance. Experience the benefits of seamless integration with the rXg.

The rXg revolutionizes the subscriber experience. Gone are the days of waiting on hold for a service provider and enduring long truck rolls for manual activation. With rXg, the entire subscription process is fully automated, eliminating the need for operator intervention. Subscribers can enjoy fast and seamless activation, getting the services they want right away. This significantly improves subscriber satisfaction, as they are able to get up and running quickly and easily. Say goodbye to frustration and hello to a seamless subscriber experience with the rXg.

The rXg offers unparalleled flexibility and integration capabilities when it comes to billing. The rXg can work seamlessly with your existing billing systems, including over two hundred credit card payment gateways, property management systems, and facility management systems. Whether you want to maintain your “business as usual” billing methods or take advantage of the integrated captive portal and walled garden, the rXg has you covered. With its flexible and scalable billing solutions, you’ll be able to streamline your billing processes, increase revenue, and improve customer satisfaction.

The rXg makes it easy for networks to configure these complex billing solutions:

## **Self-Service Transactions:**

The rXg supports a user-friendly, self-service portal that allows customers to easily manage their transactions using credit or debit cards. This convenient and secure payment option streamlines the billing process, providing customers with immediate access to services upon successful payment. The portal is designed with robust encryption and security features, ensuring the safety of customers’ sensitive data while offering seamless, real-time transactions.

## **Pre-paid Codes:**

The rXg also enables venues to generate and distribute pre-paid access codes for their services. This method allows customers to purchase these codes in advance, either at the venue or through other authorized channels. Customers can then redeem the pre-paid codes for access to the desired services. This flexible and efficient billing option helps venues cater to a wide range of customer preferences and simplifies the billing process, as no additional transactions are required once the code is redeemed.

## **Chickens for Wi-Fi:**

In remote areas where traditional payment methods may not be readily available, rXg supports a versatile barter system that enables venues and distributors to accept various alternative forms of payment, such as goods, services, crops, livestock or local currencies, in exchange for access to their services. By adapting to the unique needs of these communities, rXg ensures accessibility for all while allowing the venue or distributor to maintain a sustainable business model. It can also help network providers build relationships with customers in these areas and support the local economy.
